

ASTROS

Wireless Presentation & Conferencing

Make Meetings Wireless

What is ASTROS?

Wireless Presentation (BYOD)

Participants can choose their preferred method of screen sharing, including:

ASTROS Pod

A driverless, plug-and-play USB-C transmitter for hassle-free sharing.

ASTROS App

A feature-rich application for enhanced functionality.

Native Protocols

Support for AirPlay, Google Cast, and other mirroring standards.

Wireless Conferencing (BYOD+BYOM)

ASTROS Conferencing enables meeting hosts to wirelessly access room conference peripherals.

These peripherals work seamlessly with Microsoft Teams and Zoom, running directly on the host's laptop.

This feature is available through both the **ASTROS Pod** and **App**.

About Astrogate

Based in Taiwan, we launched Astrogate and the "ASTROS" brand in 2019 to deliver high-quality wireless presentations globally, using our technical and domain expertise.

Astrogate's team began in 2006, originating from the team that commercialized the first wireless presentation solution, wePresent.

Start meetings in seconds

1

Plug in the Pod

2

Press share button

3

Start wireless meeting

Product features

Remote View

View presenting content directly on your own device.

Wireless Conferencing

wirelessly access room display and conference peripherals.
